About

Me

I'm Fasya Hanifah Putti student Bachelor's Degree (Computer Engineering) and Master's Degree (Electro Engineering). I'm 21 years old. I'm from Jakarta. I'm very interesting about UI/UX design, because allows me to merge my passion for creativity with my fascination for understanding human behavior. Creating digital experiences that are not only visually appealing but also intuitive and user-centric excites me.
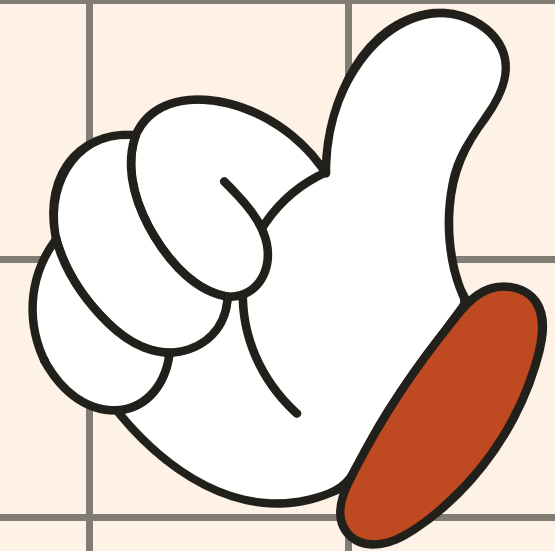

Education

2020 - Present

Telkom University

Bachelor's Degree : Computer Engineering

2023-2025

Telkom University

Master's Degree : Electro Engineering

Personal

Skills

UI/UX Design

Front-End Developer : ReactJS
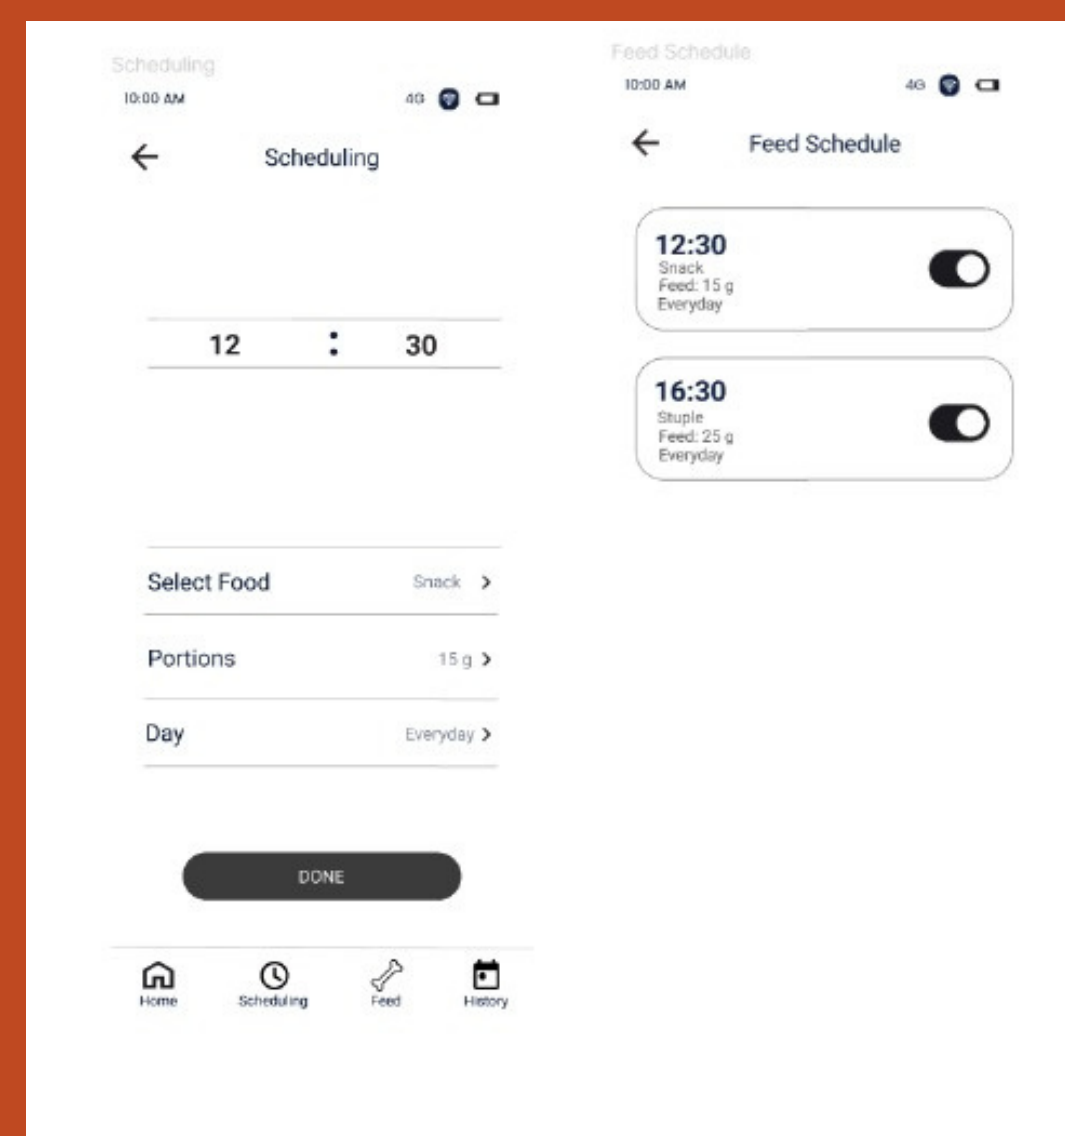

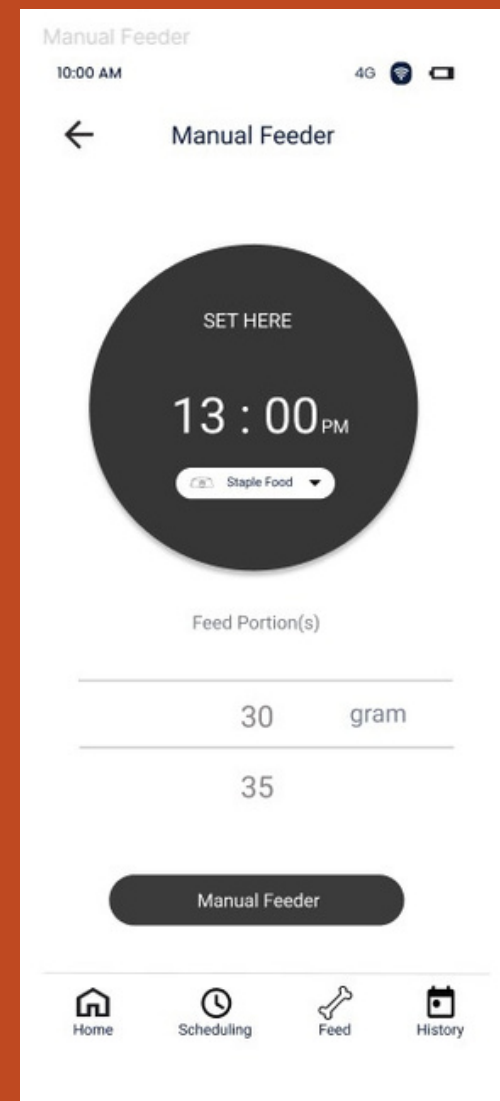

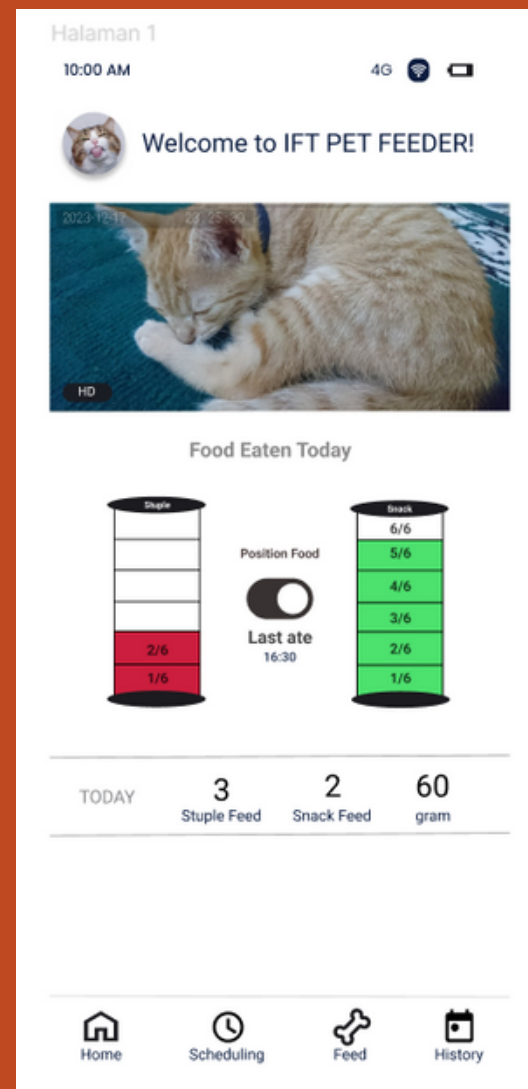

Foto / Video Editing

Project

During my time in college, I undertook several UI/UX design projects that allowed me to apply my skills in design. I usually use Figma for designing UI for my applications, and then if i have spare time, I implement it in the form of coding using ReactJS

This is my final project called "IFT PET FEEDER", where I created an Automatic pet feeder device and its application. Actually, the application is almost similar to common ones, but here I have an advantage where there are 2 different types of food available. Furthermore, users can adjust the weight portion of the food to be dispensed, and there is also a monitoring camera that detects pet movements for 2 seconds.

This is a major project assignment. This project involves redesigning an application similar to Gojek, but this application is specifically for food delivery in the Telkom University area, which I named "Telu Food and Drink".
